Foreword

BCQS is proud to present the 2025 Edition of our Market Trend Report, marking the Tenth Edition of this essential industry resource. Since its launch in 2010, the report has provided valuable insights into construction cost trends and market dynamics across the Caribbean and selected Latin American markets, supporting informed decision-making at every stage of the development cycle.

This milestone edition builds on our longstanding commitment to tracking construction trends across the region. Following its introduction last year, Antigua & Barbuda now enters the report with year-over-year escalation analysis, allowing us to capture emerging trends and strengthen cross-regional comparisons.

The 2025 report covers seventeen principal jurisdictions, including: Anguilla, Antigua & Barbuda, Aruba, The Bahamas, Barbados, British Virgin Islands, Cayman Islands, Curaçao, Guyana, Jamaica, Saint Lucia, Saint Barthélemy, St. Maarten, Trinidad & Tobago, Turks & Caicos Islands, and from Latin America, Brazil and Colombia.

As always, the report delivers succinct, reliable, and actionable information on construction costs. By examining the key components, materials, equipment, and labour, we calculate cost benchmarks on a per square foot and per square metre basis across a range of building types. These figures are supported by contextual data, including government statistics, living costs, and tourism performance, to present a well-rounded perspective on each market.

This edition also continues to include insights into current residential sales and rental values, offering readers an understanding of broader market trends and property dynamics across the region.

The strength of the BCQS Market Trend Report lies in our deep regional knowledge, built from decades of experience and an expansive portfolio of diverse and complex projects. Our on-the-ground teams are uniquely positioned to interpret local conditions, navigate market shifts, and provide insights that are both relevant and reliable.

We are grateful to our clients and partners for your ongoing trust and collaboration. Your continued support enables us to deliver high-quality information that contributes to the success of your projects throughout the Caribbean and Latin America.

While this report offers a comprehensive view of the markets we serve, it is intended as a general guide. We strongly encourage you to consult with your local BCQS office for detailed, project specific advice, tailored to your location and development goals.

Hotel Indigo Bridgetown Barbados

Market Overview

Slower Global Growth Amid Trade Pressures and Gradual Inflation Declines

The IMF's World Economic Outlook (April 2025) projects global GDP growth at 2.8%, revised down from 3.3% in earlier forecasts. This reflects persistent inflationary trends, heightened geopolitical tensions, and the impact of newly introduced U.S. tariffs, which are reshaping global trade flows. While inflation is gradually easing, the IMF notes progress remains uneven, with services inflation still elevated in several economies. Nonetheless, labour markets have shown resilience, and most central banks continue to adopt a cautious policy approach. According to the IMF, a soft landing remains possible, with inflation expected to ease without causing a global recession, though risks remain tilted to the downside.

Regional Impact: Latin America and the Caribbean
The IMF has downgraded its 2025 growth forecast for Latin America and the Caribbean to 2.0% (from 2.5%), largely due to a sharp contraction expected in Mexico (Reuters, April 2025). Across the Caribbean, the outlook remains mixed as the region adjusts to post-pandemic normalisation, tighter global financial conditions, and slowing demand from key trading partners.

Inflation is gradually softening, but core inflation persists in markets with active construction pipelines and strong labour demand. While most banking systems remain healthy, credit growth has slowed, and access to affordable financing remains uneven.

Despite these challenges, the Caribbean continues to show economic resilience. Tourism performance remains strong, with several destinations, including Turks & Caicos, Aruba, the Dominican Republic, and St. Maarten, already surpassing pre-pandemic arrival levels. Tourism remains a cornerstone of regional recovery, driving demand for infrastructure investment and supporting wider economic momentum.

The World Bank has urged Caribbean governments to rethink growth strategies, prioritising productivity, human capital, and climate resilience to strengthen long-term competitiveness (World Bank, April 2025).

Construction Market Conditions and Escalation Trends
Despite a softer global economic backdrop, construction activity across the Caribbean remains steady, supported by public investment, tourism-linked development, and infrastructure modernisation. According to BCQS data, the average construction cost escalation across the region has moderated to 4.4% over the past 12 months, down from 7.3% between 2023 and 2024. For comparison, the previous reporting cycle, covering the two years following our 2020 market study, recorded a total escalation of 19.22%, reflecting an annualised average of 9.6% during a period marked by pandemic-driven volatility.

This stabilisation reflects easing supply chain constraints, more predictable material availability, and a moderation in post-pandemic demand surges. However, construction markets remain vulnerable to import dependency, freight volatility, and labour shortages, particularly in jurisdictions with limited local capacity.

While tourism remains a key economic driver, construction activity is increasingly supported by a mix of hospitality, residential, and infrastructure projects aimed at long-term growth and resilience in high-traffic destinations.

At the policy level, governments are investing in resilience. In the British Virgin Islands, a landmark $100 million infrastructure loan is funding public works in roads, water systems, and community facilities. Similarly, the Turks & Caicos Government's Project Plan 2023–2025 includes airport expansions, utility upgrades, and housing development (TC Weekly News, February 2025).

The OECD and UN ECLAC's Caribbean Development Dynamics 2025 report underscores these patterns, highlighting that construction remains a key contributor to GDP, while calling for increased focus on climate-adaptive infrastructure and skilled labour development.

Looking ahead, steady growth in both non-tourism infrastructure, such as social housing, utilities, and climate-adaptive projects, and continued investment in hotel and resort development is expected to sustain construction activity across the region.

Moskito Island, British Virgin Islands

Margins and Market Positioning

Construction pricing remained broadly stable across the region between 2024 and 2025, with most jurisdictions reporting no change in contractor profit margins or general conditions. The average profit margin dipped slightly from 11.6% to 11.2%, with the Bahamas recording the only notable increase (from 15.0% to 18.0%). Anguilla's general conditions declined from 15.0% to 12.0%, while all other jurisdictions, including Barbados, Aruba, BVI, and Cayman Islands, reported no change. These figures reinforce the region's overall pricing consistency and underline a competitive but balanced construction environment.

In response to ongoing cost pressures, developers are increasingly adopting strategic procurement, phased delivery models, and value engineering to manage risk while maintaining quality and delivery timelines.

At the same time, persistent labour shortages, particularly in skilled trades such as masonry, plumbing, and site supervision, continue to influence both project timelines and cost structures across several jurisdictions. These constraints, highlighted in regional economic research and reflected in industry experience, remain a key factor shaping delivery strategies and long-term planning across the sector.

Emerging Risks: U.S. Tariffs and Global Trade Disruption

Since compiling data for this edition, the United States has introduced new tariffs on a range of imported goods. While aimed at addressing trade imbalances, these measures are expected to impact global supply chains, particularly in regions like the Caribbean that rely on U.S. materials and distribution channels.

In the context of construction, these trade shifts may affect sourcing strategies, material availability, and overall project costs, though the extent remains to be seen. While investor sentiment may hesitate in the short term, the long-term fundamentals for regional growth remain strong, and BCQS does not anticipate a major shift in the construction pipeline at this stage.
We will continue to monitor these developments and provide further insight as regional implications become clearer.

Conclusion

As the Caribbean continues to navigate a complex and evolving global landscape, the construction sector remains a vital contributor to long-term regional resilience. While global uncertainties, ranging from trade dynamics to inflationary pressures, present ongoing challenges, a balanced mix of infrastructure investment, private-sector development, and tourism-led momentum is expected to sustain construction activity across key markets.

Governments are progressing national priorities in infrastructure and climate resilience, and investor confidence remains steady in high-potential jurisdictions. Looking ahead, BCQS will continue to provide informed, region-specific insight to support effective planning, delivery, and investment across the Caribbean and Latin America.

Navigating Caribbean Hospitality: Trends, Risks, and Opportunities in 2025

As 2025 unfolds, the Caribbean hospitality sector stands at a pivotal point, balancing strong performance with emerging economic and geopolitical factors. From resilient tourism growth and expanding development pipelines to evolving policy landscapes, this report examines the performance, challenges, and opportunities shaping the future of the Caribbean hospitality sector.

The Caribbean hotel industry experienced a year of steady growth in 2024, marked by strong performance metrics despite some mid-year fluctuations. According to STR's recently published year-end figures, overall hotel occupancy in the Caribbean stood at 66.6%, with average daily rates (ADR) increasing by 4.2% to $437.02 and revenues per available room (RevPAR) rising by 6.3% to $302.76. These figures were drawn from a survey of 2,140 hotel properties comprising 286,030 rooms across the broader Caribbean region.

While occupancy saw declines in five months of 2024, the year concluded on a high note with a particularly strong December being reported. The month's 69.3% occupancy rate represented a 1.9% increase compared to December 2023, reflecting record-breaking arrival numbers in several destinations, including Barbados and Antigua & Barbuda, with both reported single-day highs at their main airports.

Challenges and Growth Drivers

Despite the region's strong tourism recovery, there are challenges to overcome. Whilst interest in hotel and resort development remains high, developers are contending with financial uncertainties. Although capital costs have shown signs of stabilisation, questions remain around the potential impact of tariffs and supply chain pressures. Insurance costs, which remain elevated across the region, continue to be a consideration for new developments, though significant further increases have not been widely reported.

Economic forecasts remain optimistic. Travel & Tourism's contribution to the Caribbean GDP is projected to return to pre-pandemic levels by early 2025, having trailed behind the global recovery due to the region's high dependence on international tourism. The sector is expected to grow at an annual rate of 5.5%, more than double the Caribbean's overall economic growth of 2.4%, reaching an estimated US$85.1 billion by 2032. The fastest-growing markets include Anguilla (+15.4%), St. Kitts and Nevis (+12.5%), and the British Virgin Islands (+9.4%).

Hotel Development Pipeline

As of early 2025, the Caribbean hotel market continues to witness robust demand, supported by a growing and increasingly diverse development pipeline. New projects reflect evolving traveller preferences, with a surge in luxury all-inclusive resorts, branded residential offerings, and boutique eco-resorts reshaping the region's hospitality landscape.

Notable upcoming projects include:

- St. Regis Cap Cana Resort & Residences (Dominican Republic) – 200 rooms and 70 residences
- Grand Hyatt Grand Cayman Resort & Spa (Cayman Islands) – 190 guestrooms and 252 condominiums
- Secrets Saint Lucia (Saint Lucia) – 355-room all-inclusive resort

According to Lodging Econometrics, the Caribbean hotel development pipeline has expanded to 151 hotels totaling 31,300 rooms as of early 2025, reflecting strong and sustained investor confidence in the region's hospitality sector. This positive momentum is further supported by the Caribbean Hotel and Tourism Association (CHTA), which recently reported 50 newly activated hotel projects adding 19,591 rooms, with an additional 29,987 rooms currently in the planning stages through 2028.

While 2024 saw fewer new hotel openings compared to prior years, the region's ongoing construction pipeline, alongside significant infrastructure investments and the introduction of new luxury brands, signals a healthy long-term outlook for Caribbean tourism development.

Industry Performance: Revenues, Expenses, and Profitability

The Caribbean hotel sector demonstrated continued resilience through 2024, supported by positive demand growth and sustained visitor arrivals. According to the CBRE Executive Roundtable (April 2025), visitation to the Caribbean increased by approximately 5% to 10% compared to 2023 levels, highlighting the region's ongoing strength as a preferred travel destination.

Growth has moderated from the surges of 2022–2023 but remains positive. Industry leaders participating in the roundtable projected budgeted RevPAR growth rates of 5% to 8% for 2025, with variations depending on geography and property type.

The 2024 Trends in the Caribbean/Latin American Hotel Industry report (CBRE) also highlighted performance up to the end of 2023, noting that ADR reached a record $428.94, and occupancy was 68.7%, representing the highest levels recorded in the past five years at the time of publication. These historical metrics provide important context to the more moderated, yet still robust, growth environment forecasted for 2025.

The Strand Turks & Caicos

While insurance costs in 2023 remained stable (0.2% increase) after years of double-digit hikes, property taxes saw a 2.3% decline, reflecting government support for the industry. Sales and marketing expenses increased the most among undistributed costs, largely due to franchise-related fees tied to revenue growth.

Potential Impacts of U.S. Policy Shifts

As of April 2025, the evolving U.S. political landscape, particularly under the second Trump administration, continues to introduce some uncertainty for Caribbean tourism and investment. Discussions around stricter travel regulations for countries with Citizenship-by-Investment (CBI) programmes have raised concerns, particularly as they may affect visa access for Caribbean nationals visiting the U.S. These proposals are not yet formalized, but Caribbean governments are actively seeking clarification to maintain strong bilateral travel relationships. Importantly, these discussions have not impacted American travel to the Caribbean, which remains robust. Nonetheless, prolonged uncertainty could weigh on future investment decisions if not addressed promptly.

Additionally, shifts in U.S. policy related to economic aid, trade, and climate initiatives may influence long-term development and recovery planning. The freezing of certain U.S. aid programs, as reported by The Guardian (February 2025), has already prompted regional governments to reassess financial strategies and explore alternative partnerships. If sustained, these changes could impact infrastructure resilience and investment pacing.

Moreover, Reuters (March 2025) reported that Caribbean leaders are seeking clarity from the U.S. after being included in a draft list of countries potentially facing visa restrictions, due to perceived deficiencies in their CBI programmes. While no policies have yet been enacted, these developments have introduced diplomatic strain and raised questions for investors monitoring regional access and mobility.

While the strength of the U.S. dollar continues to support outbound travel to the region, broader macroeconomic shifts, such as inflation and interest rate volatility, may impact traveller budgets and investor sentiment. However, demand for Caribbean travel remains resilient, and the region's natural appeal, combined with ongoing airlift and cruise expansions, positions it well for continued growth.

Market Outlook for 2025

Building on insights from the CBRE Executive Roundtable (April 2025), industry experts anticipate a 5-8% RevPAR growth in 2025, with regional variations based on market conditions. The Dominican Republic is expected to lead performance, supported by strong MICE (Meetings, Incentives, Conferences, and Exhibitions) business and expanded airlift capacity. However, some destinations may experience more moderate growth due to the lingering effects of the 2024 hurricane season and geopolitical uncertainty, including potential impacts related to the U.S. presidential election cycle.

Looking ahead, traveller expectations continue to evolve, with demand increasing for personalised experiences and high-quality service. A 2024 Marriott study found that 75% of respondents consider vacations essential for their well-being, up from 65% in the previous year. Additionally, 67.7% of travellers prioritised travel in their budgets for 2025, signaling sustained demand.

Cruise Industry Developments and the Rise of Private Island Destinations

A growing trend within Caribbean tourism is the expansion of private island developments by major cruise operators. According to reports published by Reuters and the Financial Times in late 2024, cruise lines such as Royal Caribbean, Carnival, and Norwegian are investing heavily in private destinations like Royal Caribbean's "Perfect Day at CocoCay," which has become a model for future developments. These exclusive islands offer curated experiences and extensive amenities, appealing to modern travellers' preferences for wellness, convenience, and immersion.

By 2025, passenger capacity at private island destinations is projected to more than double compared to 2019 levels. While this evolution signals innovation within the cruise sector, it also presents challenges for traditional Caribbean ports, many of which are experiencing reduced cruise traffic. To remain competitive and sustain cruise-related spending, ports of call must adapt by differentiating their offerings through curated shore excursions, immersive cultural experiences, and strategic infrastructure enhancements.

As the Caribbean adapts to evolving dynamics across both the cruise and hotel sectors, the region's long-term hospitality outlook remains resilient and promising.

Conclusion

While 2024 presented challenges, the Caribbean hotel sector remains buoyant, with strong demand, rising ADRs, and sustained development activity. Despite financial headwinds, investor confidence and growing visitor numbers continue to drive expansion. With a robust development pipeline, evolving guest expectations, and resilient economic fundamentals, 2025 is poised to be another strong year for the Caribbean hospitality industry.

Rosie Nicholls

Saba Rock Resort, British Virgin Islands

Country Escalation

Construction Cost Escalation is guided by the culmination of reputable local data sources to determine the basic construction cost elements including materials, plant and labour.

Our comprehensive cost research includes an array of common construction elements within the region and assigns a weighted value to each in proportion to their overall project cost significance. While our data is extensive, please note that it focuses on locally available resources and does not explicitly account for the additional costs associated with specialty items, which can vary significantly based on market fluctuations and geographical considerations. Below is a detailed list of the primary materials, plant, and labor elements included in our cost research, reflecting the core constituents of most construction projects within the region:

Material

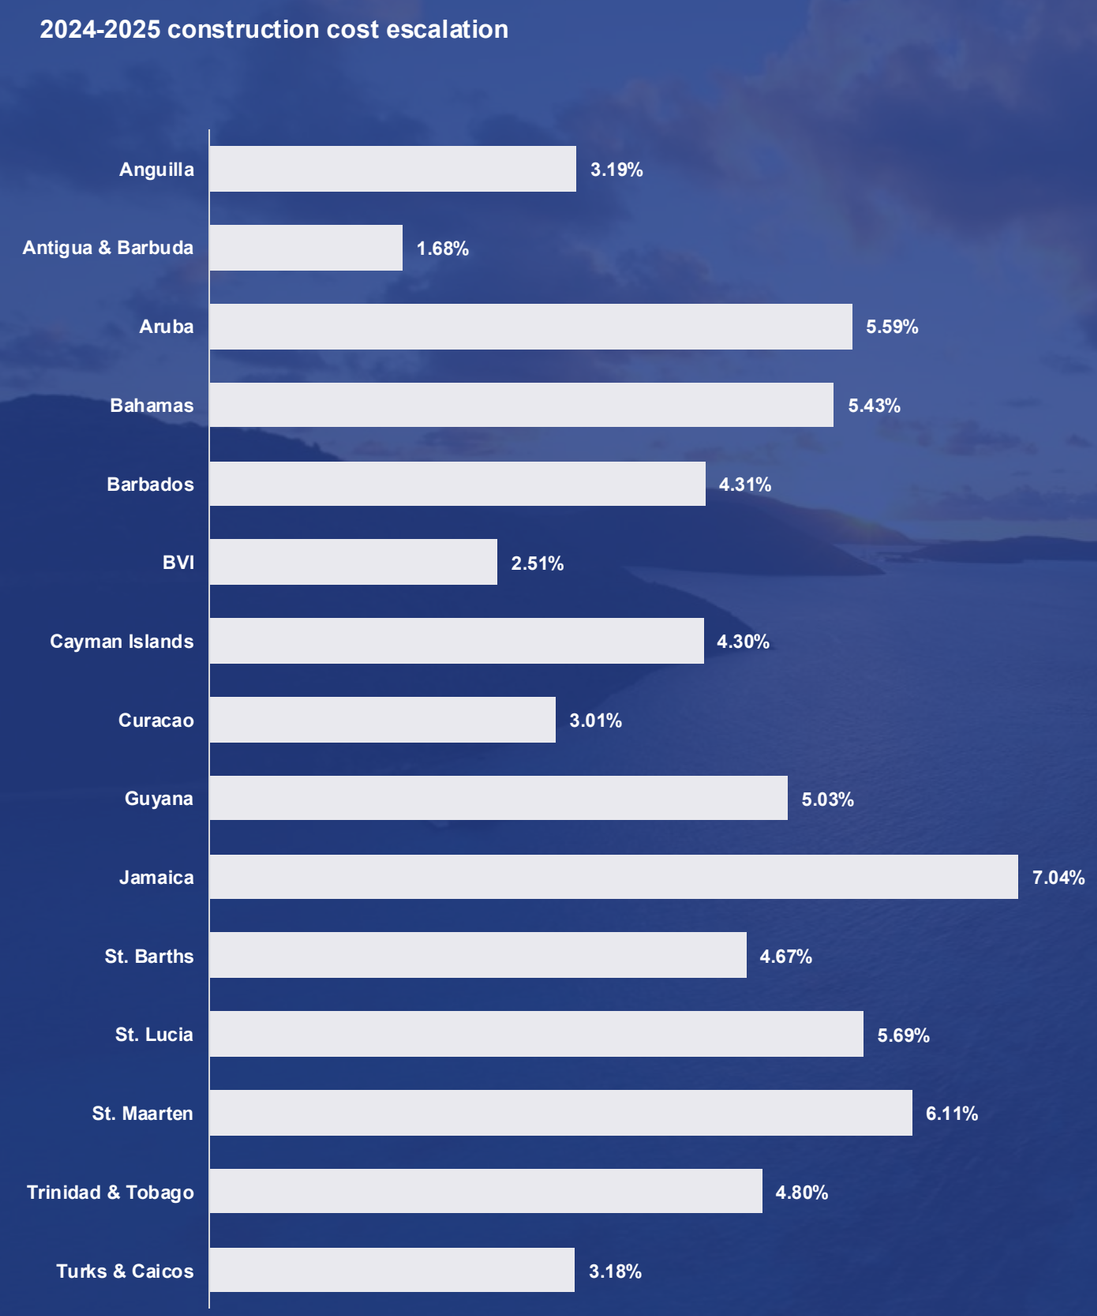
- 8'' Hollow-core Concrete Block
- Ready-mix Concrete 4000 psi pump mix
- Washed Concrete Sand
- Aggregate, 3/4 ''
- Cement
- 3/4'' rebar
- 5/8'' plywood
- 30lb Roofing Felt
- 2'' x 8'' pressure treated rafter
- Plaster Sand
- 1/2'' regular sheetrock
- Semi-gloss latex based white paint
- 16'' x 16'' ceramic floor tiles
- Hollow-core flush door 3' 0'' x 6' 8''
- Copper tubing 3/8'' diameter
- PVC Pipe 1 1/2" sch 40 – pressure

Plant

- Dump truck -12 cy
- Backhoe
- D3
- Excavator, 20 tonne

Labour

- Labourer, non-skilled
- Skilled carpenter
- Painter/ finisher
- Tiler
- Mason (excl. helper)
- Foreman/ Supervisor



Bid Environment

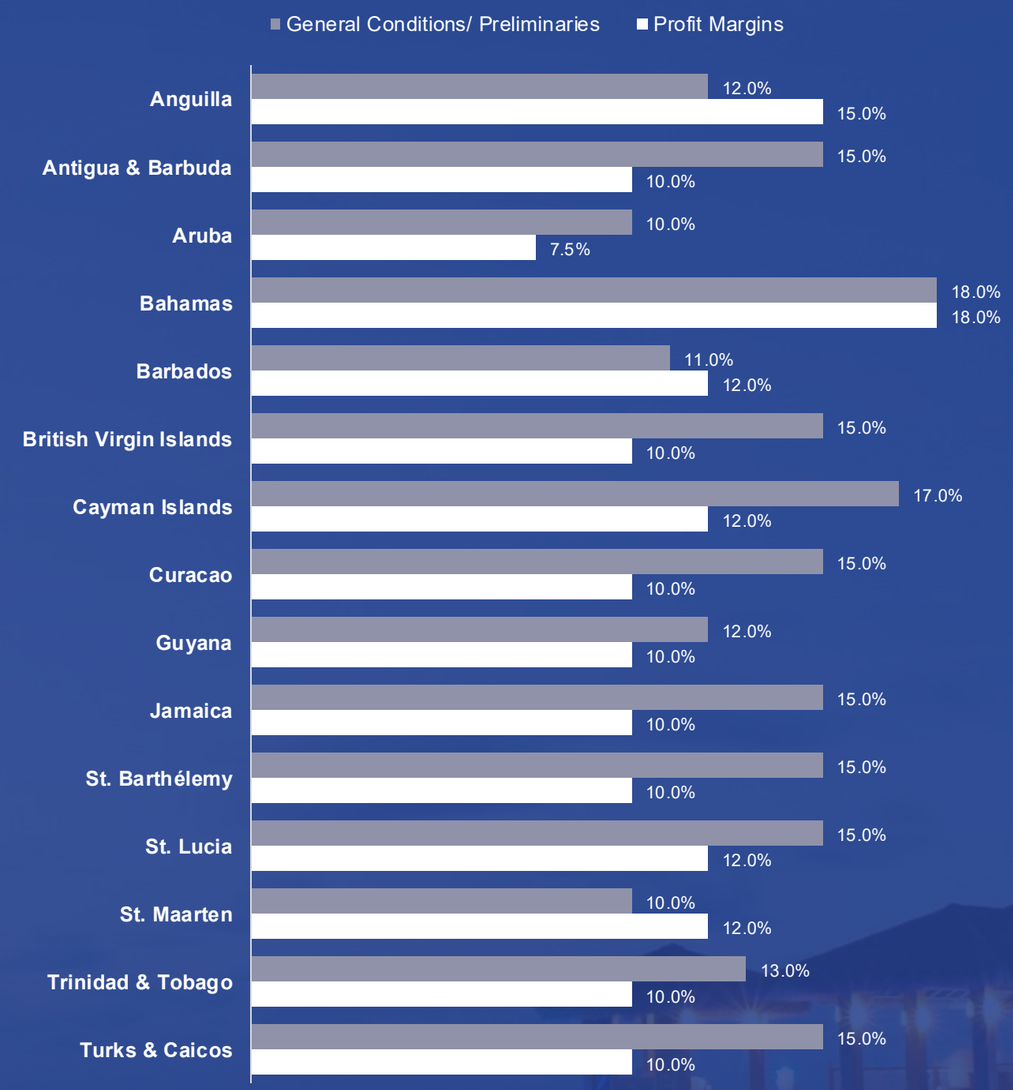
This page examines the nuances of the construction bid environment through five distinct scenarios. Discover how the competitive landscape shapes contractor bidding strategies, from aggressive low-margin bids to secure work, up to higher-margin bids in less contested markets. Gain insights into the strategic considerations contractors face across varying market conditions.

	Description of Market Conditions	Factoring Reductions and/ or Increases	Indicative Percentage (%) Profit Sought
1	Very aggressive bid environment with multiple bidders, vendors, subcontractors and contractors (lump sum hard bids) are willing to bid work at or below cost to pay for leased equipment and keep critical work force employed. They have no or critically low backlog. They are operating in the red and need work.	At cost	5
2	An aggressive bid environment with coverage in all levels of contracting. Owners can get participation for all work. Contractors have a little backlog but are still aggressively looking for work. The workforce and equipment is not at 100% capacity and close to operating at a loss. Bidders will place a minimal profit on the work being bid.	Just above cost	10
3	This is a neutral bid environment. Owners can get participation in all work but may have difficulty getting work/ bids from speciality contractors. The contractor's labour force and equipment are operating at capacity with the flexibility to complete all work on the books. Contractors have and are not concerned about backlog.	Neutral historical aggressive for profit	15
4	Contractors are operating at capacity. They are having difficulty completing work on hand. The backlog is at 100% capacity. Owners will have difficulty finding bidders for some of the specialty contractors. All tier contractors will bid work at a higher-than-average profit margin.	Marginally aggressive above average profit	20
5	Contractors are operating above capacity. They cannot complete the work they have on hand without aggressive hiring, significant equipment procurement and/or expediting materials for projects. Contractors are pricing work with an aggressive mark up/profit. Owners are having difficulty getting participation for proposed projects.	Aggressive well above average	25

Descriptions/Notes: See page 25

Average General Conditions/Preliminaries and Profit Margins

This chart presents a clear comparison of the financial benchmarks in construction bidding across various jurisdictions. Discover the typical percentages allocated for general conditions/preliminary costs and the profit margins that contractors aim for, providing insight into the cost structure and economic expectations in different regions. Please note that while the figures are specific, actual percentages may vary by up to 5% due to fluctuating market conditions and project specific factors, providing a range within which the values typically fall.



Residential

Indicative Construction Costs (USD per Sq.Ft.)

The table below provides a comprehensive comparison of indicative construction costs per square foot for residential properties in the Caribbean, categorised into three levels of build quality: modest, medium, and high. For each category and jurisdiction, we offer a cost range from the lowest to the highest estimates, derived from our year-on-year cost escalation analysis, offering a reliable guide with a 95% confidence level. It's important to recognise that there is a luxury bracket, where costs may surpass our highest estimates due to the extent of signature or bespoke finishes and installations, which vary based on individual design choices and selections. Our aim is to furnish our readers with data-driven insights that enable informed decision-making in the Caribbean's residential construction sector.

Descriptions/Notes: See page 25	MODEST QUALITY		MEDIUM QUALITY		HIGH QUALITY	
	Low	High	Low	High	Low	High
Anguilla	150	190	390	580	640	1070

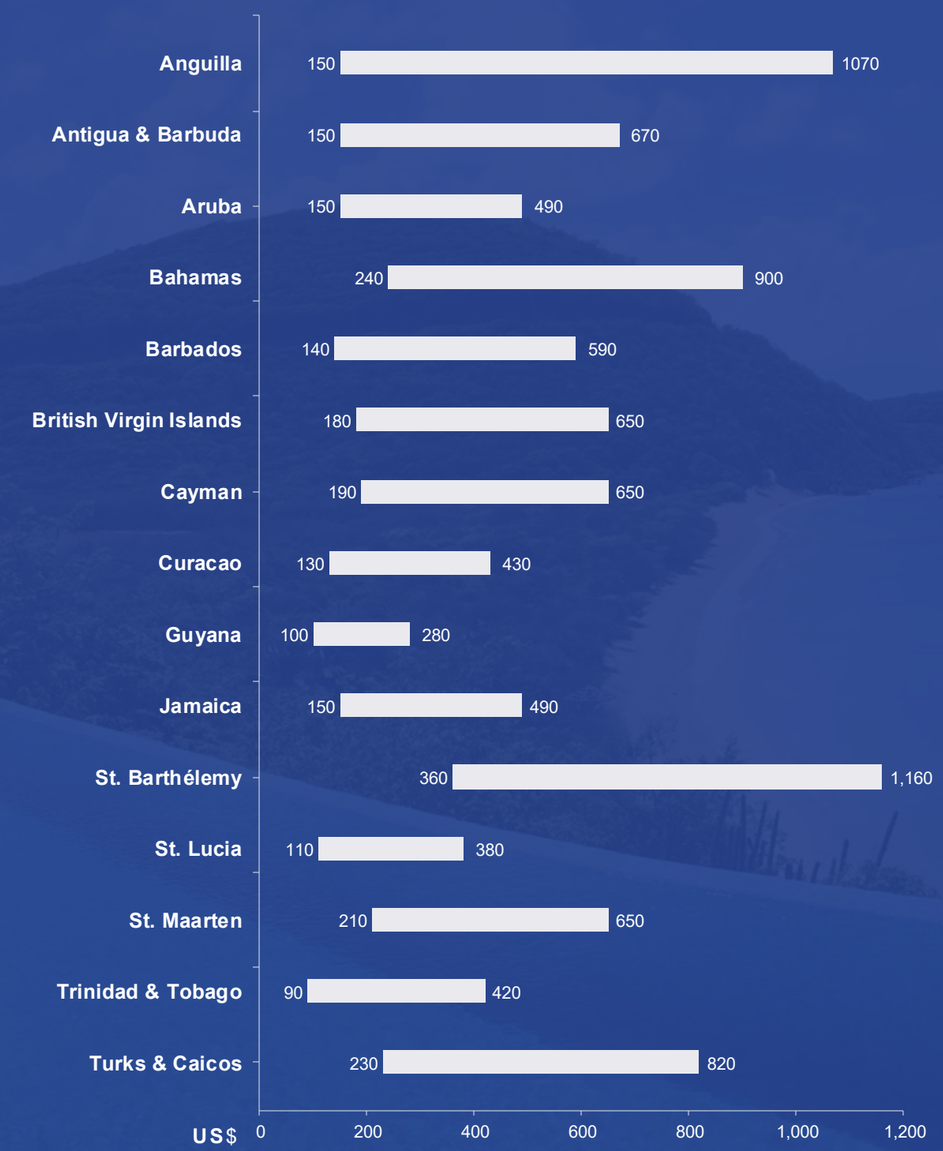
Comparative ranges of construction costs per square foot for residential developments by country: covering modest, medium and high quality builds.



Hotel & Resort

Indicative Construction Costs (USD per Sq.Ft.)

The table below provides a comprehensive comparison of indicative construction costs per square foot for 'Three Star Economy' and 'Five Star Low Rise' hotel and resort developments in the Caribbean. For each category and jurisdiction, we offer a cost range from the lowest to the highest estimates, derived from our year-on-year cost escalation analysis, offering a reliable guide with a 95% confidence level. It's important to recognise that there is a luxury bracket, where costs may surpass our highest estimates due to the extent of signature or bespoke finishes and installations, which vary based on design choices and selections. Our aim is to furnish our readers with data-driven insights that enable informed decision-making in the Caribbean's hotel and resort construction sector.

Hotel & Resort

Average Rack Rates Per Night

In the dynamic Caribbean market, an understanding of average rack rates is pivotal for hotel and resort development. Our analysis offers a spectrum of nightly rates from economy three-star to premium five-star properties, indicating market positioning and revenue potential. Developers should note that while presented rates provide a baseline, peak tourist seasons can significantly alter pricing, with rates potentially surging beyond 200% of the median. Such seasonality is crucial in revenue forecasting and pricing strategy formulation.

Market Overview

The big question in 2025 is what economic. policies Donald Trump will implement in the United States and how these will impact the global economy. While Latin America's major economies successfully navigated the global interest rate hikes of 2022 and 2023, a stronger US dollar is already putting pressure on local currencies. How central banks and governments respond will be critical.

The anticipated policies from the new US administration are likely to boost short-term growth but also result in higher inflation and interest rates. The concern is whether this expected growth will be to the detriment of others.

The global economy begins 2025 in a strong position, following reasonable growth in 2024, with inflation under control and historically low unemployment.

Latin America has the potential to capitalise on its abundant natural resources, human capital, and growing innovation. However, managing economic policy with expertise will be essential to navigate the challenges ahead.

Brazil is becoming increasingly attractive for investment in energy transition and vehicle electrification. Its strategic reform programme includes a historic overhaul of the goods and services tax system and the implementation of a new fiscal regime. A major milestone in 2025 is the approval of a regulated carbon market, which introduces a legal framework for trading carbon credits. This not only advances climate and economic objectives but also promotes innovation and sustainable technology. Although GDP growth is expected to slow, resilient domestic demand and strong agricultural performance should support continued economic activity.

Chile is expected to benefit from strong external demand for critical minerals used in electrification and the global energy transition. Investment remains key, with steady recovery in 2024 and forecasted growth above 5% in 2025, driven by monetary policy easing and large-scale mining projects.

Mexico faces challenges, but also opportunities. Trump's return to the White House may introduce renewed uncertainty, as seen in his previous term. However, the country's close trade ties with the US and its growing role in nearshoring are likely to support its economy. Projected growth in 2025 is between 0.5% and 1%, with fiscal discipline and prudent government spending essential for stability. While investor caution may rise during the US transition, Mexico's strong fundamentals, including reduced external imbalances, a solid banking sector, moderate debt levels, and an autonomous, inflation-focused central bank—provide a solid foundation for growth. Since 2023, Mexico has become the leading exporter to the US, reflecting the benefits of global supply chain reconfiguration.

Argentina is also poised for a rebound after a year of significant fiscal reform. Following encouraging results in 2024, the government's programme, centered on a zero deficit and eliminating Central Bank money printing, has strong public backing. Monthly inflation is now under 3%, and the annual rate is forecast to drop from 211% in 2023 to below 30% in 2025. The official exchange rate is expected to end 2025 near 1,300 pesos per US dollar or lower. A tax amnesty launched in August 2024 brought more than $22 billion into the financial system—not to raise taxes, but to revitalise the private sector. This increase in dollar inflows, alongside other elements of the reform programme, enabled the Central Bank to rebuild reserves during a period of typically low foreign exchange activity.

James Slattery

Brazil Regional Construction Cost Differences

In consideration of the expansive geographical diversity of Brazil's landscape, we present a detailed table delineating the regional differentials in construction costs. São Paulo, a global financial hub, serves as our standard for comparison with a set point of 0.00%. The data illustrates the significant cost fluctuations experienced in various states, marking adjustments both above and below this baseline. Notably, cost variations in Brazil exhibit a remarkable range, extending beyond 20% in certain locales.

Brazil: State - City	% of Change
Rio de Janeiro - Rio de Janeiro	3.89%
São Paulo - São Paulo	0.00%
Paraná - Curitiba	-12.54%
Amazonas - Manaus	-7.68%
Distrito Federal - Brasilia	-5.58%
Mato Grosso - Cuiabá	-6.57%
Santa Catarina - Florianòpolis	-8.88%
Minas Gerais - Belo Horizonte	-10.13%
Pernambouco - Recife	-12.14%
Alagoas - Maceió	-10.11%
Espirito Santo - Vitoria	-9.89%
Maranhão - São Luís	-10.31%
Paraiba - João Pessoa	-11.04%
Goiás - Goiânia	-11.48%
Pará - Belém	-12.15%
Amapa - Macapá	-12.15%
Rio grande do Norte - Natal	-11.75%
Mato Grosso do sul - Campo grande	-13.42%
Bahia - Salvador	-14.52%
Sergipe - Aracaju	-14.52%
Ceará - Fortaleza	-15.26%
Rio grande do sul - Porto alegre	-16.66%
Piaui - Teresina	-17.42%

Colombia Regional Construction Cost Differences

In consideration of Colombia's diverse geography and the consequent variations in construction costs, we present an insightful table detailing the regional differences. Using the capital city, Bogotá D.C., as our baseline at 0.00%, we compare the percentage change in construction costs across various states and their respective cities. The data highlights that while most regions hover closely around Bogotá's benchmark, some deviations do occur, reaching as high as a 4.03% increase and an 11% decrease in certain areas. This table serves as a guide to the adjustment indices required for each region, reflecting the cost dynamics relative to Bogotá's standard.

Colombia: State - City	% of Change
Villavicencio - Meta	4.22%
Manizales - Caldas	0.23%
Bogotá D.C.	**0.00%**
Ibagué - Tolima	-2.11%
Santa Marta - Magdalena	-4.22%
Armenia - Quindío	-4.45%
Neiva - Huila	-4.45%
Medellin - Antioquia	-8.43%
Valledupar - Cesar	-9.13%
Bucaramanga - Santander	-9.37%
Tunja - Boyaca	-9.84%
Barranquilla - Atlantico	-10.77%
Cartagena - Bolivar	-11.71%
Monteria - Cordoba	-12.88%
Cali - Valle del Cauca	-14.52%
Popayan - Cauca	-14.75%
Pasto - Nariño	-17.10%

Notes, Terms and Sources

CARIBBEAN

Please note that all data presented reflects the market conditions at the time of data collection or report writing. The information is intended to provide a snapshot of the market at that time and may not represent current conditions.

Page 6-7

1. Indicators such as water, electricity and especially gasoline are all subject to fluctuations but are indicators of cost levels at the time of writing. Where figures vary depending on value or type of goods or services, such as import duty on building materials, or stamp duty on property transfer, then a range or medium average has been calculated.
2. Where metric measurement or other currencies are used, conversions have been done.
3. Currency exchange rates are for general information purposes only and are subject to change at any time. Rates are valid at the time of writing.

Page 8-9

1. Tourism figures are subject to revision by reporting countries.
2. Article sources: World Travel and Tourism Council (WTTC), Caribbean Tourism Organisation (CTO), Smith Travel Research (STR), Expedia, and Marriott International.

Page 10-11

1. While our data is extensive, note that it focuses on locally available resources and does not explicitly account for the additional costs associated with specialty items, which can vary significantly based on market fluctuations and geographical considerations.
2. The average overhead and profit margin percentages are typical for projects ranging from $1M to $5M in construction cost. Average overhead and profit margin percentages for higher cost projects are expected to be less due to economies of scale.

Page 12-17

1. The indicative construction costs are given in US currency per square foot of gross floor area, measured to the external face of the external walls for a spectrum of property types. These costs are shown in a low to high range for each building type. These costs have been derived both from our material, plant, and labor indexing, combined with expert on-ground opinions and market experience in each jurisdiction. All costs are indicative averages and have many caveats. Figures exclude land costs, professional and legal fees, plus all other soft costs which should be added to the costs in this study.
2. Our report presents average sales and rental values in US dollars per square foot, covering a variety of property types. Values are provided in a range from low to high for each building type included.
3. Where metric measurement or other currencies are used, conversions have been done.

The building types referred to in the Caribbean cost indicator sections are as follows:

- **High quality residential home:** New construction, high quality finishes, complete MEPF network including sanitary fixtures, including swimming pool.
- **Medium quality residential home**: New construction, medium quality finishes, complete MEPF network including sanitary fixtures.
- **Modest quality residential home:** New construction, modest quality finishes, complete MEPF network including sanitary fixtures.
- **Hotels/ condos five star:** Five-Star resort with normal facilities.
- **Hotels/ condos three star:** Three-Star economy hotel with normal facilities.
- **Offices, 1-3 storey, shell:** Shell only partitioned, staircase, package units A/C, bathrooms, doors and aluminium windows.
- **Offices, 1-3 storey, fitout:** Fitted out partitioned, staircase, package units A/C, bathrooms, doors and aluminium windows.
- **High rise, 4-8 storey, shell:** As above shell only, with elevators.
- **High rise, 4 to 8 storey, fitout:** As above fitted out, with elevators.
- **Specialist offices:** Including medical centres, laboratories, restaurants, etc.
- **Storage or warehouse Structures:** Walled and metal sheet roofed, electrical and water.
- **Retail single-storey:** Open plan, bathrooms, glass storefront.

Page 18

1. The overall market trend is based on data we have cumulated since we started reporting. New countries are added to the trend analysis after multiple years of data collection.

LATIN AMERICA

Please note that all data presented reflects the market conditions at the time of data collection or report writing. The information is intended to provide a snapshot of the market at that time and may not represent current conditions.

Page 19

1. Currency exchange rates are for general information purposes only and are subject to change at any time. Rates are valid at the time of writing.

Page 20-23

1. All building costs for Latin America are shown in m² (1 m² = 10.764 sq. ft.).
2. Costs are given in local currency per m² of gross floor area, measured to the external face of the external walls.
3. All costs are indicative averages and have many caveats.
4. Figures exclude land costs, professional and legal fees, plus all other soft costs, which should be added to the costs in this study.
5. Please consult BCQS in relation to the averages used to seek any clarification.
6. All currency exchange rates are valid at the time of writing.

The building types referred to in the Latin America cost indicator sections are as follows:

High quality residential home: New construction, high quality finishes, complete MEPF network including sanitary fixtures, including swimming pool.

Medium quality residential home: New construction, medium quality finishes, complete MEPF network including sanitary fixtures.

Modest quality residential home: New construction, modest quality finishes, complete MEPF network including sanitary fixtures.

High quality fit-out works within existing residential apartment: Refurbishment of an existing apartment, high quality finishes to floors/ walls/ ceiling, new MEPF network including new sanitary fixtures.

Medium fit-out works within existing residential apartment: Full strip out works of an existing apartment, medium quality finishes to floors/ walls/ ceiling, mechanical and electrical services and lighting upgrade.

Modest fit-out works within existing residential apartment: Refurbish existing apartment with medium quality finishes.

High quality office fit-out/ city centre: Acoustical quality suspended ceiling, internal partitioning with acoustic consideration, mechanical, electrical, plumbing and fire safety installations including lighting upgrade, installation of below floor power distribution and data cabling, enhanced finishes to bathrooms, tenant stand-by power generation and UPS, IT and telecommunications installations, adaptation of life safety systems and signage, decoration and branding, high quality carpet generally, specialist finishes to reception/lobby.

Medium quality office fit-out/ city centre: As above, but with medium quality finishes.

High-tech factory/ laboratory: Pad foundation system including strip footings, reinforced concrete ground floor slab and vapor barrier, structural steel frame including all columns and beams, curtain glazed facade, metal wall cladding and insulation, concrete staircase and CMU wall, internal partitioning and doors, medium quality finishes to floor, walls and ceiling, plumbing and drainage system to the overall building and sanitary fixtures, electrical system including generator set, communication/ alarms/ data system including CCTV system/ cameras/ access control, telephone/ WIFI system, audio/ video system and TV and screen projection, air handing units, air distribution ductwork and extract and supply grilles, exhaust system, elevator and scissor lift, sprinkler system.

Large warehouse distribution centre: Pad foundation system including strip footings and reinforced concrete ground floor slab, roofing structural steel frame, in-situ reinforced concrete to columns and beams, external CMU wall with metal wall cladding, Internal partitioning and doors, modest quality finishes to floor, walls and ceiling, plumbing and drainage system to the overall building and sanitary fixtures, electrical system including generator set, UPS system to store, communication/ alarms/ data system including CCTV system/cameras/access control, telephone/WIFI system, audio/video system, air handing units to stores only, air distribution ductwork and extract and supply grilles, exhaust system, sprinkler system.

Warehouse/factory unit: Pad foundation system including strip footings and reinforced concrete ground floor slab, reinforced concrete including all columns and beams: using bolted connections for secondary beams / primary beams, external CMU wall, internal partitioning and doors, modest quality finishes to floor, walls and ceiling, plumbing and drainage system to the overall building and sanitary fixtures, Electrical system including generator set, communication/ alarms/ data system including CCTV system/ cameras/ access control and telephone/ WIFI system, air handing units, air distribution ductwork and extract and supply grilles, exhaust system, sprinkler system.

Large shopping centre / mall - shell and core: Shell & core in concrete, glazed curtain wall façade, reinforced concrete staircase, CMU walls, Internal partitioning and doors, high quality finishes to floor, walls and ceiling, Plumbing and drainage system to the overall building and sanitary fixtures, electrical system including generator set, UPS system, BMS system, communication/ alarms/ data system including CCTV system/ cameras/ access control, telephone/ WIFI system and audio/ video system, air handing units, air distribution ductwork and extract and supply grilles, exhaust system, elevators and scissor lift, sprinkler system, landscape works.

Supermarket/ hypermarket: Pad foundation system including strip footings, reinforced concrete ground floor slab and reinforced concrete including all columns and beams, external CMU wall, internal partitioning and doors, modest quality finishes to floor, walls and ceiling, plumbing and drainage system to the overall building and sanitary fixtures, electrical system including generator set, communication/ alarms/ data system including CCTV system/ cameras/ access control and telephone/ WIFI system, air handing units, air distribution ductwork and extract and supply grilles, exhaust system, sprinkler system.

Luxury hotel, excl. FF&E: Refurbishment of an existing building, full strip-out of an existing building, structural modifications to be compliant with the design, new external glazed façade and windows to overall building, internal partitioning with acoustic consideration, high quality finishes to new public and guestroom area with some iconic construction elements, new plumbing and drainage system to the overall building and sanitary fixtures to public, guestroom and back of house area, new electrical system including generator set, UPS system, BMS system, new communication/ alarms/ data system including CCTV system/ cameras/ access control, telephone/ WIFI system and audio/ video system, air handing units, air distribution ductwork and extract & supply grilles, exhaust system, elevators, sprinkler system.

4 star hotel, excl. FF&E: Refurbishment of an existing building. As above but with medium finishes.

3 star hotel, excl. FF&E: New construction, new shell and core in concrete, glazed façade and windows to overall building, concrete staircase and CMU wall, internal partitioning and doors, medium quality finishes to floor, walls and ceiling, new plumbing and drainage system to the overall building and sanitary fixtures, new electrical system including generator set, UPS system, BMS system, new communication/ alarms/ data system including CCTV system/ cameras/ access control, telephone/ WIFI system and audio/ video system, air handing units, air distribution ductwork and extract and supply grilles, exhaust system, elevators, sprinkler system, landscape works.

4 star hotel, excl. FF&E: New construction. As above but with medium to high quality finishes..

5 star hotel, excl. FF&E: New construction. As above but with high end quality finishes.

ADDITIONAL NOTES/DISCLAIMERS:

This report is intended as a general guide only and does not constitute legal, financial, or professional advice. For detailed construction advice, the services of a professional RICS accredited and indemnified Quantity Surveyor should be sought. BCQS International makes every effort to ensure the accuracy of rates and statistics but does not accept responsibility for any actions of individuals based on the findings of this report. BCQS International gives no warranty, representation or assurance that the statements, conclusions and opinions expressed or implied in this report are accurate or valid. BCQS International has prepared this report without any acceptance or responsibility on their part to agents outside of the employ of BCQS International.

Discrepancies between the 2024 and 2025 figures may reflect corrections to previously reported data, as well as refinements in collection methods.

Sources have been referred to where appropriate. Although extensive research has been carried out in the compilation of this report, much of it has been generated in-house, and not all references have been named. We hereby extend our thanks to those sources known to us through professional relationships, suppliers, employment brokers, plant hire companies etc. throughout our named jurisdictions.

Reproduction or publication of any part of this report, or any references to it, in any form is strictly prohibited without prior written approval from BCQS International regarding the format and context of its appearance.

Findings are valid for three months due to financial market volatility, after which they should be re-examined. Please consult your local BCQS contact for the most up-to-date and customized cost data. BCQS International does not guarantee the accuracy of the statements, conclusions, or opinions expressed herein.

This report is intended as a general guide. For the most current and tailored cost data, we strongly encourage you to contact your local BCQS representative. They can provide customised insights specific to your project's requirements and location.
